Imran Ali

Lahore, Pakistan | +92 305 6151224 | imranali.13imran@gmail.com

Professional Summary

Forward-thinking AI Engineer specialized in Generative AI, Agentic Systems, and end-to-end LLMOps. Experienced in building production-grade Retrieval-Augmented Generation (RAG) pipelines, implementing multi-agent workflows using LangGraph, and applying Model Context Protocol (MCP) standards. Hands-on expertise in harness and loop engineering, observability/tracing with LangSmith, AI guardrails, and building RESTful APIs using FastAPI. Proficient across the full machine learning lifecycle from data analysis to AWS deployment.

Technical Skills

Generative & Agentic AI: Prompt Engineering, RAG Systems, Agentic Frameworks (LangGraph), Model Context Protocol (MCP), Agentic Coding (Claude Code), Pydantic Schemas

FDE & System Architecture: Loop Engineering, Harness Engineering, Structured Outputs

LLMOps, Observability & Security: Tracing & Observability (LangSmith), LLM Evaluation (RAG & Model Metrics), AI Guardrails & Security, Model Monitoring

Deployment & Web Frameworks: FastAPI, AWS Cloud Services, RESTful API Development, Version Control (Git/GitHub)

Machine Learning & Deep Learning: Supervised/Unsupervised Learning, Regression, Classification, Neural Networks, Deep Learning Architectures

Data Science & NLP/CV: Exploratory Data Analysis (EDA), Pandas, NumPy, Data Preprocessing, Natural Language Processing, Computer Vision Basics, SQL

Projects

Enterprise Agentic RAG & LLMOps Platform

- Engineered end-to-end Retrieval-Augmented Generation (RAG) pipelines using advanced prompt engineering, LangGraph multi-agent loops, and Model Context Protocol (MCP) standards.
- Integrated LangSmith for deep system tracing, logging, and performance observability across multi-step agent flows.
- Implemented AI Guardrails and security checks to enforce safety policies and structured outputs using Pydantic schemas.
- Conducted systematic LLM Evaluation to assess retrieval precision, response grounding, and hallucination metrics.

Agentic Coding & API Infrastructure

- Applied agentic workflow tools (Claude Code) and harness engineering to streamline feature development and automated testing.
- Developed and deployed high-performance asynchronous backend services using FastAPI hosted on AWS.

Machine Learning & NLP Data Pipelines

- Conducted extensive Exploratory Data Analysis (EDA) using Pandas and NumPy to prepare structured/unstructured datasets for production modeling.
- Designed, trained, and validated Machine Learning and Deep Learning models for classification and text analysis.

Education

Virtual University of Pakistan — 2022 – 2026
BS in Computer Science (Focus on User Experience) — *Lahore, Pakistan*

BISE Lahore — 2021
ICS (Intermediate in Computer Science) — *Lahore, Pakistan*
